Instructions: How to Import the Functions into MapForce

First, open one of the mappings in MapForce, for example, the Goodreads mapping.

Download all four function files individually. Then follow these steps:

1. In MapForce, go to **View → Manage Libraries → Global Library Imports → Add**.
2. Select one of the downloaded function files.
3. Repeat this process until all four functions have been imported.

Once imported, you should see the functions on the left side of MapForce, in the **Libraries** panel under **User**, alongside the other standard functions.
